Gulfstream Selects Radiant Power to Supply Wireless Capacity Touch Switches/Panels for G650/G280/Aircraft and Elite Cabin Upgrades

Sarasota, FL – Radiant Power Corp, a subsidiary of HEICO Corporation (NYSE: HEI, HEI.A), was selected by Gulfstream to supply wireless capacity touch switch and passenger interface products for the G650, G280, and the Elite Cabin upgrade for G450/550.

The wireless capacity touch technology offers passengers a unique switch interface similar to that found in touch screens for smartphones and tablets. The switch technology provides Gulfstream with a stylish interface which is highly modular given the wireless interface.

The switches use wireless communications through the use of the IEEE 802.15.4 wireless interface. This network protocol is also referred to as a “Zigbee” network. The use of this network protocol simplifies the installation requirements of the Cabin Switches on the aircraft as it avoids the need for running network cables to each device.

“The capacity touch switches give the passenger a unique interface to manage the cabin features, and Radiant Power Corp is very excited to bring this technology to Gulfstream’s newest platforms.” remarked Jeff Densmore, Director of Engineering for Radiant Power Corp.

Located in Sarasota, Florida, Radiant Power Corp is focused on the design and manufacture of emergency power supplies, power distribution and controls, sensors and indicators, and passenger comfort products for the aerospace and military markets. More information can be found at www.radiantpowercorp.com.

HEICO Corporation is engaged primarily in certain niche segments of the aviation, defense, space, medical, telecommunication and electronic industries through its Flight Support Group and its Electronic Technologies Group. HEICO's customers include a majority of the world's airlines and air motives as well as numerous defense and space contractors and military agencies worldwide in addition to medical, telecommunication and electronic equipment manufacturers.
